

## Weekly Heat-related Illness Surveillance Report

July 28, 2021

Reporting for July 20, 2021, to July 26, 2021

**National Weather Service Forecast:** No current advisories  
**Heat Advisories Declared During the Previous Week:** 0  
**Total Heat Advisories Declared This Year:** 4

*Heat Indexes are only calculated for temperatures above 80°F with humidity of 43% or greater*

**Note on Emergency Department Data:** The results from the query used in ESSENCE, an electronic biosurveillance system, to track heat-related illnesses may be an overestimation of the actual burden of illness related to the hot weather. This overestimation is due to the nature of the query, which includes the term dehydration, a condition that may be caused by factors other than heat.

**Note on EMS Data:** These data are based on EMS pre-hospital care reports where the EMS provider has selected "Heat Exhaustion/Heat Stroke" and/or "Hyperthermia" as a primary or secondary impression a patient's illness. This impression is solely based on the signs and symptoms seen by the provider, not on any diagnostic tests. Since these numbers do not include all primary or secondary impressions that may be seen with heat exposure the actual numbers may be low. These data are reported for trending purposes only.

**Age Group Distribution of Emergency Department Chief Complaints Regarding Heat-related Illnesses for July 20, 2021, to July 26, 2021**

*Report continued on next page...*

Total Number of Heat-related Deaths	Jurisdiction*	Age Group	Gender
3	Montgomery*	18 – 44 Years Old	Male
	Prince George's	18 – 44 Years Old	Male
	Washington*	45 – 64 Years Old	Male

*\*Refers to the jurisdiction where the death occurred. \*\*Refers to a newly listed death ^Refers to updated information from OCME*

There were two heat-related deaths reported this week. One individual was suspected or presumed homeless

There have been three heat-related deaths during the reporting period. Two individuals have been suspected or presumed homeless.

**Heat Advisory criteria:** The National Weather Service will issue a Heat Advisory when the heat index value is expected to reach 105 to 109 degrees within the next 12 to 24 hours. A Heat Advisory may be issued for lower criteria if it is early in the season or during a multiday heat wave. NWS will issue an Excessive Heat Warning when the heat index value is expected to reach or exceed 110 degrees within the next 12 to 24 hours. An Excessive Heat Warning may be issued for lower criteria if it is early in the season or during a multiday heat wave.

**Suspected Homeless Death Data:** Office of the Chief Medical Examiner (OCME) Field Investigators use the U.S. Department of Health and Human Services (HHS) homeless definition to determine suspected homeless deaths. Homeless deaths are listed as suspected due to the limited information available to the Field Investigators at the time of investigation, which may result in some misclassifications.
